

**Definition** : A function  $f : D \rightarrow C$  is a **bijection** means that it is both one-to-one and onto. The **inverse** of a bijection  $f : D \rightarrow C$  is the function  $g : C \rightarrow D$  such that  $g(b) = a$  iff  $f(a) = b$ .

For nonempty sets  $A, B$  we say

$|A| \leq |B|$  means there is a one-to-one function with domain  $A$ , codomain  $B$

$|A| \geq |B|$  means there is an onto function with domain  $A$ , codomain  $B$

$|A| = |B|$  means there is a bijection with domain  $A$ , codomain  $B$
