

Definition: When a and b are integers and a is nonzero, a **divides** b means there is an integer c such that $b = ac$. Symbolically, $F((a, b)) =$ _____ and is a predicate over the domain _____. Other (synonymous) ways to say that $F((a, b))$ is true:

a is a **factor** of b a is a **divisor** of b b is a **multiple** of a $a|b$

When a is a positive integer and b is any integer, $a|b$ exactly when $b \bmod a = 0$. When a is a positive integer and b is any integer, $a|b$ exactly $b = a \cdot (b \text{ div } a)$.
