Definition For b an integer greater than 1 and n a positive integer, the base b expansion of n is

$$(a_{k-1}\cdots a_1a_0)_b$$

where k is a positive integer, a_0, a_1, \dots, a_{k-1} are nonnegative integers less than $b, a_{k-1} \neq 0$, and

$$n = \sum_{i=0}^{k-1} a_i b^i$$

Notice: The base b expansion of a positive integer n is a string over the alphabet $\{x \in \mathbb{N} \mid x < b\}$ whose leftmost character is nonzero.

Base b	Collection of possible coefficients in base b expansion of a positive integer
Binary $(b=2)$	$\{0,1\}$
Dinary $(0-2)$	[0, 1]
Ternary $(b=3)$	$\{0, 1, 2\}$
Octal $(b = 8)$	{0,1,2,3,4,5,6,7}
Decimal $(b = 10)$	$\{0,1,2,3,4,5,6,7,8,9\}$
Hexadecimal $(b = 16)$	$\{0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, F\}$
	letter coefficient symbols represent numerical values $(A)_{16} = (10)_{10}$
	$(B)_{16} = (11)_{10} (C)_{16} = (12)_{10} (D)_{16} = (13)_{10} (E)_{16} = (14)_{10} (F)_{16} = (15)_{10}$
