Recall the definition of linked lists from class. Consider this (incomplete) definition: **Definition** The function *increment*: _____ that adds 1 to the data in each node of a linked list is defined by:

 $\begin{array}{cccc} & increment: \underline{\hspace{1cm}} & \rightarrow \underline{\hspace{1cm}} \\ \text{Basis Step:} & increment([]) & = [] \\ \text{Recursive Step:} & \text{If } l \in L, n \in \mathbb{N} & increment((n,l)) & = (1+n, increment(l)) \end{array}$

Consider this (incomplete) definition: **Definition** The function $sum: L \to \mathbb{N}$ that adds together all the data in nodes of the list is defined by:

 $\begin{array}{ccc} sum: L & \to \mathbb{N} \\ \text{Basis Step:} & sum([]) & = 0 \\ \text{Recursive Step:} & \text{If } l \in L, n \in \mathbb{N} & sum((n,l)) & = \underline{\hspace{2cm}} \end{array}$

You will compute a sample function application and then fill in the blanks for the domain and codomain of each of these functions.

- 1. Based on the definition, what is the result of increment((4,(2,(7,[]))))? Write your answer directly with no spaces.
- 2. Which of the following describes the domain and codomain of *increment*?
 - (a) The domain is L and the codomain is \mathbb{N} (d) The domain is L and the codomain is L and L and L are the codomain is L are the codomain is L and L are the codomain is L are the codomain is L and L are the codomain is L are the codomain is L and L are the codomain is L are the codomain is L are the codomain is L and L are the codomain is L and L are the codomain is L are the codomain is L and L are the codomain is L and L are the codomain is L are the codomain is L are the codomain is L and L are the codomain is L and L are the codomain is L are th
- (d) The domain is $L \times \mathbb{N}$ and the codomain is \mathbb{N}
 - (b) The domain is L and the codomain is $\mathbb{N} \times L$
- (e) The domain is L and the codomain is L
- (c) The domain is $L \times \mathbb{N}$ and the codomain is L
- (f) None of the above
- 3. Assuming we would like sum((5, (6, []))) to evaluate to 11 and sum((3, (1, (8, [])))) to evaluate to 12, which of the following could be used to fill in the definition of the recursive case of sum?

(a) $\begin{cases} 1 + sum(l) & \text{when } n \neq 0 \\ sum(l) & \text{when } n = 0 \end{cases}$

(c) n + increment(l)

 $\begin{cases} sum(t) & \text{when } n \\ \text{(b) } 1 + sum(l) \end{cases}$

(d) n + sum(l)(e) None of the above

4. Choose only and all of the following statements that are **well-defined**; that is, they correctly reflect the domains and codomains of the functions and quantifiers, and respect the notational conventions we use in this class. Note that a well-defined statement may be true or false.

5. Choose only and all of the statements in the previous part that are both well-defined and true.

(a) $\forall l \in L(sum(l))$

(e) $\forall l \in L \, \forall n \in \mathbb{N} \, ((n \times l) \subseteq L)$

(b) $\exists l \in L (sum(l) \land length(l))$

- (f) $\forall l_1 \in L \, \exists l_2 \in L \, (increment(sum(l_1)) = l_2)$
- (c) $\forall l \in L (sum(increment(l)) = 10)$ (d) $\exists l \in L (sum(increment(l)) = 10)$
- (g) $\forall l \in L (length(increment(l)) = length(l))$
