Definition: A function $f: D \to C$ is **one-to-one** (or injective) means for every a, b in the domain D, if f(a) = f(b) then a = b. **Definition**: For sets A, B, we say that **the cardinality of** A **is no bigger than the cardinality of** B, and write $|A| \le |B|$, to mean there is a one-to-one function with domain A and codomain B.
